EDUCATION

2015 - 2019

PRINCESS SUMAYA UNIVERSITY FOR TECHNOLOGY

- B.SC. Degree in Computer Science

Technical Skills

- Stack: React, Vite, NextJS, TypeScript, JavaScript
- Frameworks/Libraries: React(Vite/Next), React Native, Tailwind CSS
- Design: UX/UI

LANGUAGES

- Russian, Arabic: Mother tongue
- English: Excellent skills, reading, writing, speaking

ABOUT ME

I am a Frontend Developer with 2+ years of experience, including both commercial development and academic projects. During this time, I have mastered and successfully applied technologies such as React, TypeScript, HTML5, CSS3, JavaScript, as well as libraries and frameworks like Vite, Next.js, and Tailwind CSS. I have worked on projects ranging from creating complex landing pages and e-commerce platforms to social applications, which has significantly strengthened my skills in UI/UX and API integration. Moving forward, I plan to deepen my expertise in building complex interfaces using modern approaches such as Server-side Rendering (SSR), while also progressing towards FullStack development with a focus on integrating React with microservices. I am open to Frontend Developer positions, primarily working with React, TypeScript, Redux, NextJS, and Vite.

WORK EXPERIENCE

LeadHunters   Jan/2022 - Present
Middle Web Programmer

Media Buying Agency specializing in social media traffic acquisition.

➤ Key Responsibilities and Achievements:
- Responsive Layout and Design: Developed and refined layouts for various devices, ensuring cross-browser and cross-platform compatibility
- API Development and Integration: Created and integrated APIs to ensure proper functionality of web applications.
- Bug Fixes and Code Optimization: Identified and resolved defects, improving the overall user experience by eliminating technical errors.
- Form Optimization and Enhancement: Enhanced form functionality, including [Implementation of a carousel in the form, Integration of interactive elements (doors, gifts, time, and date), and Development of an anti-duplication script for forms].
- HTML, CSS, JS Development: Collaborated closely with the development team to enhance web application performance.
- Content Localization: Reviewed and adapted pre-landing and landing pages for Arabic-speaking users.

➤ Key Performance Indicators (KPIs):
- Number of pre-landing and landing pages reviewed and implemented over 2 years: 28,183

⋯➔ TECH STACK: HTML5, CSS3, PHP, JavaScript

➤ Additional Activities:
Alongside my work, I pursued Frontend development training (React) and actively worked on pet projects:

1. Social Media App
Developed a social networking application enabling users to interact and share content.
Technical Implementation:
- Designed the application architecture and built the user interface using React and TypeScript.
- Integrated Appwrite as the backend server for secure storage and management of user data and content.
- Utilized the shadcn/ui library to create a responsive interface and Tailwind CSS for component styling.
- Implemented asynchronous server requests using React Query for state management and enhanced user experience.
- Demo: https://diagram-pi.vercel.app/

2. E-commerce Store
Developed a fully functional e-commerce platform with integrated payment systems and content management:
Technical Implementation:
- Built the product catalog and shopping cart interfaces using React and Next.js for fast page loading.
- Integrated the Stripe payment system for secure online transactions.
- Set up Sanity CMS for product management, enabling easy content addition and editing through an intuitive interface.
- Implemented component interactions using React Context for cart state management.
- Optimized application performance through server-side rendering with Next.js.
- Demo: https://ecommerce-app-ivory-two.vercel.app/

3. Admin Dashboard
Developed a functional admin panel with tools for data and process management.
Technical Implementation:
- Built an interface featuring charts, tables, and a calendar using React and Syncfusion for data visualization.
- Integrated task management functionality through a Kanban board, simplifying task planning and tracking.
- Implemented an event scheduling calendar, offering users a convenient planning interface.
- Utilized Tailwind CSS for interface styling, ensuring quick and efficient design adaptation.
- Demo: https://trendyboard.vercel.app/

Nozzum for Business Solutions   Mar/2020 - Jun/2021

Java Developer

Specializing in developing software solutions for businesses, particularly in the financial sector. The company's flagship product, "Remit Flow," is designed for currency exchange points and money transfers.

➤ Responsibilities:
- Participated in all stages of software development: design, implementation, deployment, and support.
- Analyzed requirements and contributed to achieving business goals.
- Developed and maintained Java/Java EE applications with a focus on optimization and scalability.
- Collaborated with teams to ensure quality and meet deadlines.
- Coordinated with various departments (analytics, DevOps, support) to ensure smooth system operation and successful solution implementation.
- Prepared technical documentation and provided user guidance.

➤ My Role in Projects:
- Created a sender data input module (validation, document processing).
- Integrated with the database (MySQL) for customer data retrieval and storage, working closely with the database team to optimize queries and improve performance.
- Calculated commissions, taxes, and final amounts with dynamic updates.
- Integrated external APIs for processing transfers and currency transactions.
- Implemented business logic for currency conversion rates and final amount calculations.
- TECH STACK: Java, Spring (Boot, Security), Hibernate, MySQL, RESTful APIs.

Shahin Computer Est.   Jul/2018 - Jul/ 2019

Technical support specialist

An IT services company specializing in domain registration, hosting, web design and development, as well as offering accounting systems and technical support.

➤ Responsibilities:
- Troubleshooting and resolving software and hardware issues.
- Diagnosing and fixing technical problems, including account setup and network configuration.
- Following up with clients to ensure full functionality of their IT systems after issue resolution.
